Suggested time: 55 minutes

Q1. The line l passes through the points A (3, 1) and B (4, -2).

Find an equation for l.

(3)

- Given that the point A has position vector $3\mathbf{i} 7\mathbf{j}$ and the point B has position vector $8\mathbf{i} + 3\mathbf{j}$,
 - (a) find the vector \overrightarrow{AB}

(2)

(b) Find $|\overrightarrow{AB}|$. Give your answer as a simplified surd.

(2)

Q3

$$f(x) = 4x^3 - 12x^2 + 2x - 6$$

(a) Use the factor theorem to show that (x - 3) is a factor of f(x).

(2)

(b) Hence show that 3 is the only real root of the equation f(x) = 0

(4)

Q4

The equation $kx^2 + 4kx + 3 = 0$, where k is a constant, has no real roots.

Prove that

$$0 \leqslant k < \frac{3}{4} \tag{4}$$

- Q5 A circle C with centre at (-2, 6) passes through the point (10, 11).
 - (a) Show that the circle C also passes through the point (10, 1).

(3)

The tangent to the circle C at the point (10, 11) meets the y axis at the point P and the tangent to the circle C at the point (10, 1) meets the y axis at the point Q.

(b) Show that the distance PQ is 58 explaining your method clearly.

(7)

(a) Factorise completely $x^3 + 10x^2 + 25x$

(2)

(b) Sketch the curve with equation

$$y = x^3 + 10x^2 + 25x$$

showing the coordinates of the points at which the curve cuts or touches the x-axis.

(2)

The point with coordinates (-3, 0) lies on the curve with equation

$$y = (x + a)^3 + 10(x + a)^2 + 25(x + a)$$

where a is a constant.

(c) Find the two possible values of a.

(3)

Q7

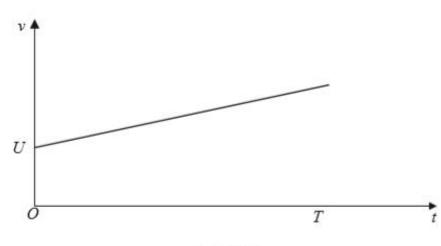

Figure 1

A car moves along a straight horizontal road. At time t = 0, the velocity of the car is $U \, \mathrm{m \ s^{-1}}$. The car then accelerates with constant acceleration $a \, \mathrm{m \ s^{-2}}$ for $T \, \mathrm{seconds}$. The car travels a distance $D \, \mathrm{metres}$ during these $T \, \mathrm{seconds}$.

Figure 1 shows the velocity-time graph for the motion of the car for $0 \le t \le T$.

Using the graph, show that $D = UT + \frac{1}{2} aT^2$.

(No credit will be given for answers which use any of the kinematics (suvat) formulae listed under Mechanics in the AS Mathematics section of the formulae booklet.)

(4)

Q8

A car is moving along a straight horizontal road with constant acceleration. There are three points A, B and C, in that order, on the road, where AB = 22 m and BC = 104 m. The car takes 2 s to travel from A to B and 4 s to travel from B to C.

Find

- (i) the acceleration of the car,
- (ii) the speed of the car at the instant it passes A.
