

Mixed questions Co-ordinate Geometry – Straight lines

1*. The points P and Q have coordinates $(-1, 6)$ and $(9, 0)$ respectively.

The line l is perpendicular to PQ and passes through the mid-point of PQ .

Find an equation for l , giving your answer in the form $ax + by + c = 0$, where a , b and c are integers.

(Total 5 marks)

2*.

Figure 1

Figure 1 shows a right angled triangle LMN .

The points L and M have coordinates $(-1, 2)$ and $(7, -4)$ respectively.

(a) Find an equation for the straight line passing through the points L and M .

Give your answer in the form $ax + by + c = 0$, where a , b and c are integers.

(4)

Given that the coordinates of point N are $(16, p)$, where p is a constant, and angle $LMN = 90^\circ$,

(b) find the value of p .

(3)

Given that there is a point K such that the points L , M , N , and K form a rectangle,

(c) find the y coordinate of K .

(2)

(Total 9 marks)

3*.

Figure 1

The straight line l_1 , shown in Figure 1, has equation $5y = 4x + 10$

The point P with x coordinate 5 lies on l_1

The straight line l_2 is perpendicular to l_1 and passes through P .

- (a) Find an equation for l_2 , writing your answer in the form $ax + by + c = 0$ where a , b and c are integers.

(4)

The lines l_1 and l_2 cut the x -axis at the points S and T respectively, as shown in Figure 1.

- (b) Calculate the area of triangle SPT .

(4)

(Total 8 marks)

Question 4

The vertices of a triangle are the points $A(5, 4)$, $B(-5, 8)$ and $C(1, 11)$.

- a Find the equation of the straight line passing through A and B , giving your answer in the form $ax + by + c = 0$, where a , b and c are integers.
- b Find the coordinates of the point M , the mid-point of AC .

6 marks

Question 5

The point A has coordinates $(-8, 1)$ and the point B has coordinates $(-4, -5)$.

- a Find the equation of the straight line passing through A and B , giving your answer in the form $ax + by + c = 0$, where a , b and c are integers.
- b Show that the distance of the mid-point of AB from the origin is $k\sqrt{10}$ where k is an integer to be found.

Question 4 (6 marks)

a $\text{grad} = \frac{8 - 4}{-5 - 5} = -\frac{2}{5}$

$\therefore y - 4 = -\frac{2}{5}(x - 5)$

$5y - 20 = -2x + 10$

$2x + 5y - 30 = 0$

b $M = \left(\frac{5+1}{2}, \frac{4+11}{2} \right) = \left(3, 7\frac{1}{2} \right)$

Question 5 (6 marks)

a $\text{grad} = \frac{-5-1}{-4+8} = -\frac{3}{2}$

$$\therefore y - 1 = -\frac{3}{2}(x + 8)$$

$$2y - 2 = -3x - 24$$

$$3x + 2y + 22 = 0$$

b mid-point = $(\frac{-8-4}{2}, \frac{1-5}{2}) = (-6, -2)$

$$\text{distance} = \sqrt{6^2 + 2^2} = \sqrt{40}$$

$$= 2\sqrt{10} \quad [k = 2]$$
